

Sr Labview developer (m/f)

Functiegroep:

ICT en Telecom

Branche:

Automatisering, Meet- en Regeltechniek

Locatie:

Arnhem, Eindhoven or Hasselt

Opleiding:

Master of Science IWT (ing)

Vacature ID:

#1485

For our client, a multinational corporation with a branch (HQ) in the Benelux and several development centers in Belgium & Holland, we're looking for several Senior LabVIEW Developers (m/f). They offer innovative test expertise and solutions to a large and various portfolio of clients. For their new European Headquarters in the Benelux they are looking for high potential engineering profiles.

Are you analytical and creative? Are you passionate about software developing? Do you love to work in team and achieving the best results? And does your profile matches as described below? Then it is you that we are looking for to be our new team member!

De functie / La fonction / The vacancy

You will become the newest addition to the engineering team. You will play an important role in the development and integration of software for validation systems. Together with your team you will develop a wide range of data acquisition systems. These are known for their fast data throughput and data integrity.

You will support the proposal and design review. You will also participate in the integration, validation and commissioning of software. You work together with the quality team and you actively contribute in the continuous improvement of tools and development processes. Perform code reviews and come up with solutions when there is a problem.

You are responsible for the evaluation of the system architecture, risk assessment and validation plan.

Het profiel / Profil souhaité / Profile

You hold a Bachelor or Master's degree with an engineering or physics background.

You are the owner of a LabVIEW or TestStand certification.

We're looking for a senior profile (5 – 10y exp) with relevant experience of software development with LabVIEW or TestStand (preferably in a manufacturing environment).

Experience with object-oriented programming, C++, C# or VB.NET is a plus.

You have knowledge of design patterns, XML and UML

You have a good understanding of software engineering and development.

You have affinity with the integration of test platforms.

You are a strong team player and when needed, you are able to take the leading role.

You are highly proficient in spoken and written English.

You are willing to work at the customer's site for a third of your time.

Het aanbod / Notre offre / What we offer

A challenging job with vertical and horizontal growth potential.

You will be part of a dedicated development team within a dynamic company with award-winning products and team.

You will work in an international environment.

You will participate in the development of market-leading, high-tech products. This in various industries, such as transportation, telecom, electronics and multimedia.

A good work-life balance.

Access to continuing education.

A full and very attractive package of primary and secondary fringe benefits.
